A Bottle

- What is inside
- How much liquid inside
- What is the max capacity
- We are low in memory

By default my bottles are:

Empty

250 CC capacity

A Bottle to be created with

- Type of content
- The amount of liquid inside
- Optional Capacity or 250 if not provided

- If content amount exceeds the capacity, set it to capacity

Make sure there is no memory leak;

Change the content type the liquid inside by setting the bottle to it.

Add to the value of the liquid inside returning the overflow;

Add to the value of the liquid inside returning the overflow into another bottle;
